Rushikesh Sunil Wani

AI Engineer | Python | RAG & LLM Applications

wanirushikesh74@gmail.com | Pune, Maharashtra, India | Portfolio | LinkedIn | GitHub

SUMMARY

Computer Engineering graduate (B.E., Honors in Cybersecurity) seeking a AI Engineer role. Builds Python RAG and LLM applications end to end: document ingestion, chunking, embeddings, semantic, BM25 and hybrid retrieval, FastAPI services, and evaluation harnesses that report whether a change made results better or worse (Recall@k, MRR, nDCG). Hands-on with LLM APIs, prompt design, SQLite, Git/GitHub, pytest and CI. Security-aware approach from cybersecurity coursework.

PROJECTS

Intelligent Document Retrieval & Evaluation Platform

Python, FastAPI, SQLite, sentence-transformers, BM25, pytest | github.com/iamrushi100/intelligent-document-retrieval

- Built a FastAPI service that ingests PDF, DOCX and TXT files, chunks them, and serves semantic (all-MiniLM-L6-v2 embeddings), BM25 lexical and hybrid search using Reciprocal Rank Fusion.
- Built a reproducible evaluation harness: 30 hand-labelled questions (4 unanswerable) over 8 documents, with Recall@K, Precision@K and MRR@K exported to JSON and CSV. On the 26 answerable questions, MRR@1 was 1.00 for semantic and hybrid vs 0.96 for BM25; documented that the small dataset limits the conclusion.

RAGWatch - RAG Evaluation & Quality Monitor

Python, SQL (SQLite), scikit-learn, Streamlit, pytest, GitHub Actions | github.com/iamrushi100/ragwatch

- Built a local-first tool that measures retrieval quality on labeled questions using TF-IDF retrieval with Recall@k, MRR and nDCG@k; stored run history in SQLite with comparison by dataset, cutoff and question ID.
- Added threshold alerts, per-question failure analysis and a Streamlit dashboard; in a controlled test, reversing the ranking dropped Recall@2 from 1.00 to 0.00, showing the metrics catch regressions.
- Wrote 170+ pytest tests and a GitHub Actions workflow that runs the suite on every push and pull request.

Vulnerability Prioritization with Evidence & Asset Context

Python, FastAPI, SQLite, Streamlit, Groq LLM API, unittest | github.com/iamrushi100/ai-security-vulnerability-prioritizer

- Built a decision-support tool that combines NVD CVE records, CISA KEV listings, FIRST EPSS probabilities and labelled synthetic asset context (criticality, exposure) in SQLite; missing or stale evidence is flagged, never treated as zero.
- Implemented a transparent, deterministic scoring heuristic (CVSS, KEV, EPSS, asset criticality, exposure) with exact-only product/version matching and a CVSS-only baseline; on a 4-finding synthetic fixture, the contextual order differed from CVSS-only. Heuristic is not validated on real outcomes.
- Delivered a FastAPI service (ranked findings, finding detail, optional Groq explanation kept separate from scores), a Streamlit dashboard with saved human-review history, and 133 offline unit tests passing.

EXPERIENCE

AI Intern - CodeFlow Studios — Jan 2025 - Jun 2025

- Developed Python backend functionality for client websites serving small businesses.
- Integrated chatbot features into client websites to automate basic customer queries and improve user interaction.
- Collaborated with teammates to deliver responsive web solutions within project timelines.

Artificial Intelligence Intern - CodSoft — Jan 2025 - Feb 2025

- Delivered a machine learning project in Python covering data preprocessing and model implementation; earned internship certification.

TECHNICAL SKILLS

Programming & Databases: Python, SQL, SQLite, MySQL, MongoDB
Backend & APIs: FastAPI, REST APIs, JWT authentication, Pydantic, Streamlit, pytest
AI & Machine Learning: LLM APIs, Prompt Engineering, RAG, Embeddings, ChromaDB, LangChain, BM25, Hybrid Search (RRF), Retrieval Evaluation (Recall@k, MRR, nDCG), scikit-learn, NLP, PyTorch, TensorFlow, OpenCV
Tools & Practices: Git, GitHub, GitHub Actions (CI), VS Code, Jupyter Notebook, Data Structures and Algorithms
Security: Cybersecurity fundamentals (Honors coursework), secure coding, authentication and access control

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering, Honors in Cybersecurity — 2022 - 2026

Savitribai Phule Pune University (SPPU) | CGPA: 8.05

CERTIFICATIONS

Python & Data Science Training - Ethans Tech | Generative AI Training - Ethans Tech | Introduction to Generative AI - Google Cloud | Introduction to Natural Language Processing
